

PRESS RELEASE

EnerDynamic Hybrid Technologies Introduces The “ENERTEC PWR WAGON”

Welland, Ontario: April 10, 2017-EnerDynamic Hybrid Technologies Corp. (TSX-V: EHT) (“EHT” or the “Company”) is pleased to announce its newest ENERTEC product, the “ENERTEC *PWR Wagon*”.

The *PWR Wagon* is a stock trailer customized to provide a remote site power source via its self-contained solar energy system. All sides of the trailer are constructed of EHT’s ENERTEC Embedded Solar Panels, feeding into an integrated battery bank. The trailer can provide from 3Kw to 10Kw of power depending on the size of trailer. Designed to allow for construction site charging such as cordless tool battery packs, operation of power washers, fans, work lights and overnight charging of electric lifts, the applications are limited to the imagination of the site crew. The unit is even capable of powering a microwave oven at lunch time or a 12v cooler. A single *PWR Wagon* can charge over 1,000 smartphones per day simultaneously when outfitted for emergency services applications.

During the day, an ENERTEC *PWR Wagon* is continually charging and maintaining the onboard battery banks and providing power for charging of items. When the flip up side walls are locked in the closed position, tools can be safely charging in a secure trailer.

Beyond the construction industry, the wagon can be used for outdoor events including camping, weddings, street parties and more. The logical access to the *PWR Wagon* for these applications would be via local equipment rental agencies which can add the wagon to their rental stock.

The balance of the trailer allows for towing by virtually any vehicle with a hitch which includes cars and pickup trucks. Further, the trailer can be towed by ATV or a snowmobile to a remote site to power a cabin, homestead or emergency shelter.

Mr. John Gamble, CEO of EHT, comments “The ENERTEC *PWR Wagon* is another major step in the development of our patented ENERTEC products. We have been in contact with several major trailer manufactures in recent weeks as well as potential distribution partners, both looking to partner in the rollout of the *PWR Wagon*. We believe this product will begin to contribute to our revenue streams later in the fiscal year.”

Below are pictures of the **ENERTEC PWR Wagon**.

The EHT advanced ENERTEC Modular Wall and Roof System uses a proprietary skin and foam core that is stronger and more energy efficient than traditional wood or steel structures providing the highest ratings for energy efficiency. EHT works with its partners worldwide to erect the buildings on-site utilizing EHT staff and local crews. After installation, each structure can be furnished and finished to meet the customer's requirements including siding, tile, kitchens and bathrooms or segregated commercial rooms. The finished wall product can be shipped on pallets and delivered via rail, truck or water in standard formats.

At the core of the ENERTEC product line is the ENERTEC Embedded Solar Roof Module. Solar cells can be embedded in a proprietary fire proof skin resulting in substantial cost savings by eliminating heavy glass panels and aluminum racking required for traditional solar panels. Two barriers to greater adoption of solar energy are weight limitations of the roof on which solar panels could be deployed and onerous shipping and labour costs. A lighter product at a better price point will open a larger market for solar due to the faster return of capital investment especially for rural and remote users looking to go off-grid. Furthermore, the entire EHT embedded solar roof becomes a massive solar panel capable of producing significantly more energy than the home requires, allowing the structure to then become an important source of power for the local micro grid or large battery storage systems.

About EnerDynamic Hybrid Technologies

EHT delivers proprietary, turn-key energy solutions which are intelligent, bankable and sustainable. Most energy products and solutions can be implemented immediately wherever they are needed. EHT stands above its competitors by combining a full suite of solar PV, wind and battery storage solutions, which can deliver energy 24 hours per day in both small-scale and large-scale format. In addition to traditional support to established electrical networks, EHT excels where no electrical grid exists. The organization supplies advanced solutions for various industries in combination with energy saving and energy generation solutions. EHT's expertise includes the development of module structures with full integration of smart energy solutions. These are processed through EHT's production technologies into attractive applications: modular homes, cold storage facilities, schools, residential and commercial out buildings and emergency/temporary shelters.
